

24 Standard EPDM Color Granules*

Black SBR Post-Consumer Tire Rubber

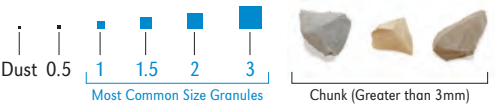

Ultimate Systems' black SBR (Styrene Butadiene Rubber) is made entirely from post-consumer recycled tire rubber. Available in a variety of sizes, SBR is the primary material used in the manufacture of Ultimate Tough recycled rubber flooring. Small percentages of SBR are also used in the Ultimate Design line of flooring.

Ultimate Systems' recycled rubber flooring is manufactured using different blends of EPDM color granules (and black SBR). The granules are peroxide cured to insure tighter cross link density, excellent weatherability, more intense color and overall better physical properties than sulfur-based granules.

Granule Sizes (millimeters)

***Custom Color Matching**

Ultimate Systems can custom match virtually any color in an EPDM granule. Contact Ultimate Systems Customer Service at 419-692-3005 for more information on custom color matching options.

Visit www.firstinrecycledflooring.com and click on the Ultimate COLOR link to digitally blend your own custom rubber flooring. You can even preview how your designs will look in a simulated environment!

Actual color of granules may vary.
